

Facility Status Display

Easily Monitor Alarm & Facility Information From Any E2

The Facility Status Display enables retailers to easily monitor alarms and other store information from any in-store E2 Facility Management System. With the Facility Status Display, information is automatically combined in one accessible place. With its small format, the Facility Status Display is easily installed virtually anywhere, from the manager's office to departmental work areas and maintenance rooms.

With its intuitive navigation and presentation of information, any member of your team is able to quickly view alarms and other relevant store information. Display case temperatures and open door signals are no longer ignored. Automatic color coding of information makes it easy to understand what is most important, what actions are necessary, and what issues have already been resolved. Alarm history is available at the touch of a button, and customizable point names take the guesswork out of equipment identification.

Benefits

- Provide relevant information directly to store and department managers
- Intuitive navigation and easy to read screens allow anyone to use the display
- Apply custom names to simplify unit identification
- Alert store personnel to potential problems with the built-in alarm light and buzzer
- Install anywhere in minutes with a standard Ethernet connection and 120V power input

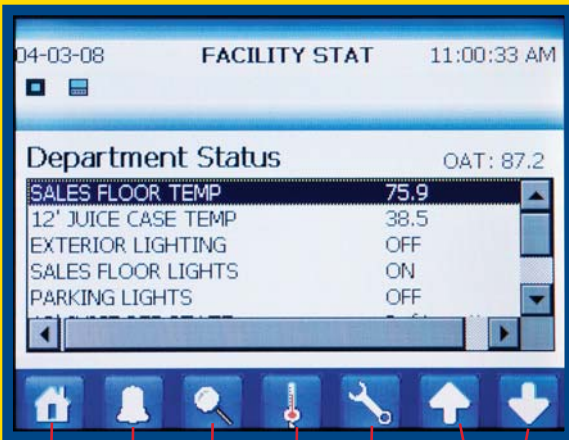

Facility Status Display

Built-In Alarm History

The Facility Status Display's extensive internal memory is capable of storing up to 200 alarms and system status notifications. These events may be reviewed either locally or from Emerson's ProAct software, where alarm trends, graphs, and other analysis may be performed.

View Display Information

Each Facility Status Display may be configured to present up to 30 data points with a custom name. For example, the status of a cooler could be displayed as "Low Temperature Walk-in Closed," or the temperature of a case could be shown as "Ice Cream Case #2 - 10 degrees."

Multiple facility status displays quickly put store information in front of those who need it.

Intelligent Store™ Architecture

The Facility Status Display is a component of Emerson's Intelligent Store™ architecture. The architecture creates an integrated suite of products and services that provide retail operators a new level of sophistication and insight into their operations. When integrated or linked together, these innovative products and services can provide maintenance, energy, and reliability gains. Also included in the Intelligent Store are the E2 Facility Management System, Intelligent Store Discus® compressor, select Lennox HVAC units, and other third party devices. For more information on Emerson's Intelligent Store, the Control Link platform, or facility monitoring and field services, please visit www.EmersonRetailSolutions.com
