

## Copeland® Outdoor Condensing Unit

### Base control functions

- box temperature
- defrost cycles
- fan speed control

### Compressor protection

- current overload
- phase reversal
- liquid injection control
- self diagnostics
- warnings and alarms

### LED display

- rapid troubleshooting
- easy maintenance.

It's what's inside  
that counts...

Copeland® outdoor refrigeration condensing units integrate the many benefits of scroll compressor technology, fan speed control and advanced diagnostic controls. The integration of these technologies, deliver higher energy efficiency and lower sound levels, while ensuring reliable performance and operation in foodservice applications.

Integrated electronics are utilized for compressor and fan speed control and are coupled with advanced diagnostic controls that predict and protect against compressor and systems issues that can lead to unexpected performance losses or worse, unplanned equipment failure.

Packaged in an attractive, light-weight, and slim-profile configuration, foodservice operators gain additional benefits of location flexibility and ease of installation.
