Genteq™ Unveils World's First 460V X13 Motor

FORT WORTH (February 24, 2009) – Genteq™, a division of Regal Beloit, has unveiled the latest addition to its family of proven ECM products: the 460V X13 motor.

“Genteq understands that the light commercial industry has been looking for a motor that will bring high efficiency to their specific applications,” said Paul Selking, HVAC industry leader. “The 460V X13 motor is based on the proven technology of the X13 platform, with additional new technologies that take this motor to the next level of innovation.”

With applications in the commercial and light industrial markets, the 460V X13 provides proven ECM technology, resulting in up to 80 percent higher efficiency than a PSC motor. In addition to significantly improving system efficiency, this motor can eliminate the bulky step down transformer component, thus decreasing labor costs, reducing cabinet size and customer inventory, and improving cycle time for installation.

Regal Beloit (NYSE:RBC) is a leading manufacturer of mechanical and electrical motion control and power generation products serving markets throughout the world. Regal Beloit is headquartered in Beloit, Wis., and has manufacturing, sales, and service facilities throughout the United States, Canada, Mexico, Europe and Asia. For more information, visit the company's website at jointhegeneration.com.
