

July Troubleshooting Problem

QUESTION: With all of the control wiring harnesses disconnected and making sure that the wire ends are not touching each other, you've used an ohmmeter to check between the red and yellow wires of the condensing unit control wiring harness, and you've gotten a continuity reading. What is the next step you need to take to get this unit back on-line?

ANSWER: The next step to take in repairing this unit is to replace the low voltage control wiring to the outdoor unit.
