

SENTREE

A/C Monitoring System

Compatible with most residential central air conditioning units, the Sentree A/C monitoring system is cellular-based and:

- Provides 24/7 real-time remote monitoring of A/C health
- Displays minute-by-minute, temperature and pressure on liquid and vapor lines, and current usage
- Calculates superheat and subcool
- Enables service teams to do proactive maintenance and repairs

**AIR CONDITIONER

**PREDICTIVE
MAINTENANCE**

**REAL TIME
PRESSURE**

TEMPERATURE

**EMERGENCY
ALERTS**

QUICK INSTALLATION

It takes less than 10 minutes for a trained service technician to attach the temperature, current and pressure sensors, and mount Sentree to a wall or the A/C unit.

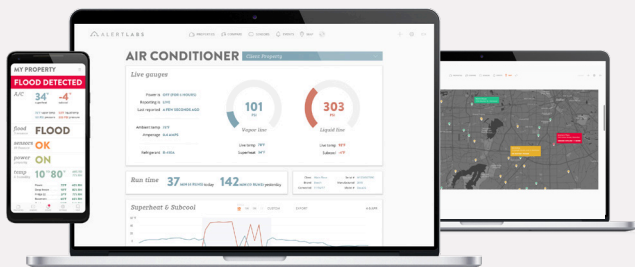

ALWAYS CONNECTED

Sentree uses a cellular connection that does not require your customers' on-site internet or WiFi network.

OPERATIONS CONSOLE

The operations console is your control center for all of your customers' sensors. The platform provides:

- Access to all properties, sensors, analytics and alerts in one place
- Flexibility to sort properties by location, assigned technician or sensor
- Event warnings that help you to identify and diagnose issues, and dispatch the right service

DASHBOARD & INSIGHTS

The subscription includes access to the Buildings Insights Dashboard on your phone and computer which provides assigned users with 24-hour data and information about A/C performance for each property.

AIR HANDLER & HUMIDITY ALERTS, TOO

Now you can get 24/7 instant text and email alerts to your phone when a float switch trips, there's water in the drain pan or the indoor humidity or temperature rises above the set threshold. There are Alert Labs solutions that can help you and your customers minimize damage in their homes and vacation properties.

Float Switch Alerts

Sentree + Floodie + Float Switch Cable

Humidity and Temperature Alerts

Sentree + Humie

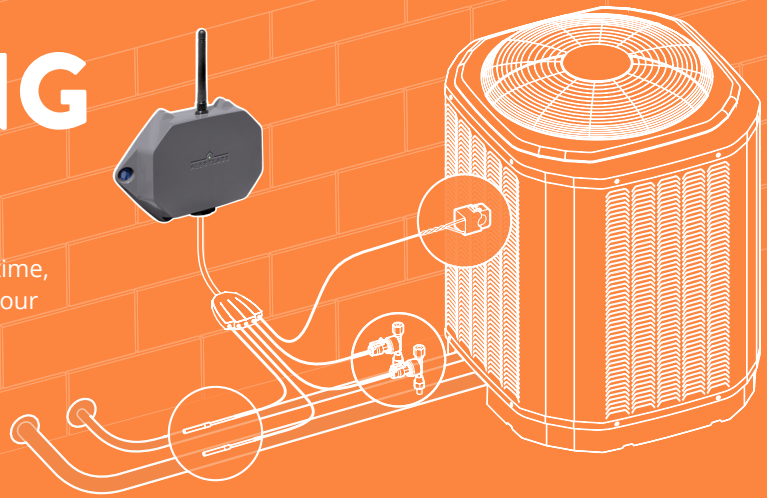

By knowing what is wrong with the A/C unit before sending a technician, contractors can dispatch the right technician, the first time. Homeowners can avoid costly water or mold damage repairs and inconvenient A/C breakdowns. They also enjoy shorter A/C down time because diagnosing problems is faster.

Optional accessory cables can also expand Floodie and Humie's capabilities in critical and hard-to-reach areas.

THE FUTURE OF MONITORING AND SERVICING

Sentree A/C Monitoring System

The Sentree A/C monitoring system helps you make money, save time, reduce service costs and keep customers happy. Stand out from your competition with this smart sensor and monitoring system.

INCREASE REVENUE

- Sell premium service agreements with remote monitoring
- Bundle with new equipment sales
- Decrease time to new system sales
- Provide off-season service
- Upsell on existing service contracts

REDUCE SERVICE COSTS

- Optimize use of senior techs
- Reduce truck rolls needed to solve repeat problems
- Lower costs of annual maintenance visits

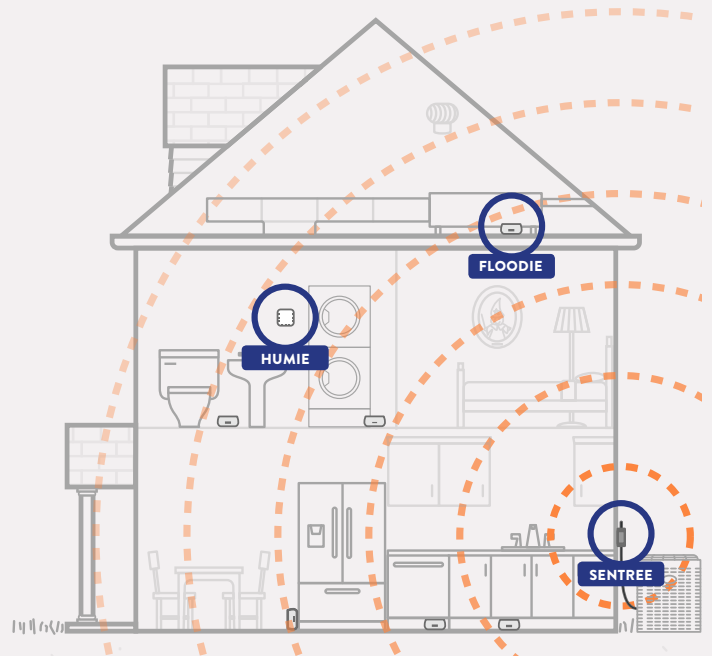

STAND OUT FROM THE COMPETITION

- Deliver new smart sensor technology
- Provide unique 24/7 monitoring service plans

BOOST CUSTOMER RETENTION

- Increase customer satisfaction
- Grow business through referrals
